Published on 25-July-2026

Following a post-publication review of the manuscript, raw data and experimental records, the authors identified unintentional oversights in selecting representative images during figure preparation. Consequently, some published images did not accurately correspond to their respective experimental replicates, raising concerns regarding the reliability of presented figures to adequately support the study's main conclusions. In view of these concerns, all authors have unanimously requested voluntary retraction of the article to maintain the integrity of the scientific record. The authors take responsibility for these unintentional errors and sincerely apologize for any inconvenience caused to the journal and scientific community.
